ABSTRACT

Academic Meeting Support Application at School of Applied Science Telkom University is a Web-based application that is made to allow the implementation of the academic level graduation more easier that will be implemented in TASS-IS (Telkom Applied Science School Information Systems). TASS-IS is the Academic Information System Telkom Applied Science School, which is an activity that uses technology to support the operation and management performance. This application is useful for selecting whether or not the student to be passed at each academic level. This application is build using the Prototype Method. Web-based application and implemented with symfony 1.0 framework, the PHP programming language and also the data that has been provided by TASS-IS. This application also provides feature to manage the rules that will be selecting student eligibility for graduation academic level. So that these applications can facilitate the implementation of the academic level graduation.
