GLOSSARY

SCM	:Supply Chain Management, physical network, the companies involved in supplying raw materials, produce goods, or deliver the finished goods to end users.
DC	:Place for departure and return of vehicle in distribution.
VRP	:Vehicle Routing Problem, combinatorial problem that belongs to the NP-Hard category
MTVRP	:VRP with Multiple Trips , VRP which applied by considering the number of routes taken, where there are more than 1 routes that can be taken by the fleet.
VRPTW	:VRP with Time Window, VRP which applied by considering the time window owned by the customer.
Branch and Bound	:Exact algorithm which used for finding the optimal solution of various optimization problems, especially discrete and combinatorial optimization
