PREFACE

Alhamdulillah, I have finished my undergraduate thesis entitled Measurement of Risk Project Maturity Using Organizational Project Management Maturity Model (OPM3): A Case Study of Construction Project in Bandung. I would like to express my sincere gratitude to those who have helped me and supported me in the process making of this paper. Ibu Devi Pratami and Bapak Achmad Fuad Bay as the first and second advisor have guided me to finish this thesis. Apart from that, they have also become my life mentor who give me wisdoms about the future. Secondly, thankyou Fiyanika Amalia Putri as a partner in this process, as well as Wika Sanggarwati and Syifa Nur Hasyyati who shared some laughs which I would never forget, Naufal Muhammad Zaki who shared the same spirit as mine and has now fortunately got internship in United Tractors, Annisa Aulia Sambas who supported me in the process of getting certified in CAPM, Jauharah, Gege, and Reza who managed to stuck in the same process of CAPM test alongside me and all of my friends in Laboratorium Fisika Dasar, HMTI Universitas Telkom, CONTENT, and Keprofesian Project Management whom I cannot mention one by one. But know this: I pray for your success, indeed. Thirdly and the most important, is my gratitude to my parents, especially my mother. It is so indescribable. Even if I wrote "thankyou" as thick as this paper, it would not be enough.

Lastly, whoever read this, I just wanted you know that success is neither measured based on how thick your paper is nor is because how early you got into *Sidang Tugas Akhir*. I would say this is just one of the million or even billion milestones of your life. You will face the real world when you have passed all of this. Do not feel superior just because you were smarter and faster. Also, do not feel bad for not achieving the high standard. Do not rush, you still have a long way to make your story a very happy ending.

This research is far from perfect. A lot of improvement is needed in order to make it much more comprehensive. I hope that there would be another similar research using this research as its base and from there, there is an improvement in the future.
