

ABSTRACT

In Indonesia, children abandoned by their parents is increasing, while the children are still in need of adequate protection to grow and develop optima, hence the need for institutions that can be a substitute for the function of parents, one of which is the Social Protection Home Childcare in Bandung, which aims to ensure and protecting children and their rights in order to live, grow, develop and participate optimally in accordance with human dignity, as well as establish a good character to be useful in society. Problems can be in the Social Protection Home Childcare is an interior that does not comply with the standards development orphanage, because there are many rooms that are not tesedia in the Social Protection Home Childcare, such as health room, counseling room, study room, and storage space , Social Protection Home Childcare as a place that can be said to be a home, not to give its function as a house in general, so that children who live in them are not able to feel the atmosphere that should be present in the house. Hence the need for redesigning the Social Protection Home Child Care, in order to achieve a standard room that should have been contained in the Social Protection Home Child Care. To that end, the authors conducted a study about the orphanage in terms of layout, ergonomics, and material that refers to the Minimum Service Standards at the orphanage in accordance with the needs of its occupants, which can be seen from the activities and facilities in a building by means of observation of the Home Protection Children's Social Care.
