

ABSTRACT

Completeness of the information is needed to provide ease the passage of an activity, especially at institutions such as Telkom University. Problems that occur in the information provided by Telkom University campus is Tel-U Students not only need information that is both academic course, but they also need information that is non-academic. Tel-U more information about the academic, non-academic while only a slight one of them is student's news portal. Media information for academic and non-academic still form of a website and the lack of development of information media websites into mobile applications.

In the design of mobile applications Telkom University Information, design using the design method of data collection, data analysis and systematic design. Collecting data through interviews, observation and study of literature. Analysis of data using qualitative methods to approach the analysis of case studies, by classifying the things that are important in the design of the user interface. After classifying the data, the designer began to perform similar analysis on mobile applications. Systematic design using the system development life cycle.

Through the mobile application information submitted on the news portal students can be delivered effectively. So that information provided can easily and quickly accepted by all the students Tel-U as the recipient of the information.
