Abstract

Technological developments and the density of population is proportional to the movement of the era. Those things are mutually supportive of each other. The present era, people cant be separated from technology, because technology makes the activity easier. Based on that, this application design is made to streamline the time. Because almost all people are mobile phone users and many applications are embedded in the media, the authors designed an application that can order the products of restaurant via mobile phone.

These applications utilizing electronic technology to access restaurant information and ordering (commerce) with mobile phone as media (mobile device). This application makes access to information online via a mobile phone becomes easier, provides a means of transactions (purchases and payments) online. On the customer side, the application provides features to look at the menu at Pizza Hutt, and features of the transaction for booking by entering the menu ordered, quantities ordered and taking time (take away) and direct deduction from the funds that have been deposited in accordance with the total ordering. While on the side of the administrator, the application provides features to manage customer data, menus, as well as transaction data. With this application, the transaction can be done anywhere without being limited by time and place.
