

ABSTRACT

PT. Aretha Nusantara Farm is a company engaged in broiler farms, the business processes that run on the company is to establish cooperation with chicken farmers where PT. Aretha Nusantara Farm as financiers and farmers only duty is to maintain and raise chickens. PT. Aretha Nusantara 3000 farm pick a partner and 9 warehouses scattered throughout the company's branch in West Java. The number of partners and branch warehouses companies turned out to have an impact on financial records that occur within the company, the recording is still done manually there is no integration of data, so that the process of recording all transactions in the company requires a long time it resulted in frequent delays transaksaksi due to report financial records not finished.

Based on the above presentation system design enterprise resource planning module based accounting Odoo 9 with accelerated method Sap (ASAP). In designing the system researchers to study literature and observations directly into the company to undertake the design of business processes today are compared with business processes Odoo 9 then comes the process of business proposal that is applied in systems with installation procedures, configuration and manufacturing procedures for use of modules on Odoo 9 accounting module. Then do the testing of the system such as data integration to other divisions, user acceptance test and risk analysis to determine whether the system could be implemented within the company so that the existing problems can be resolved within the company.
