

ABSTRACT

When backpackers do travelling, they bring stuff that can support their activities in variety locations such as urban, mountain and coast. Mostly, carrier bags are used by backpackers while travelling which have different function than they need. Some problems such as zoning and futur, opening system, handle, backsystem, hip belt, and no-place for shoes come when they used carrier bags. In this scheme, designer design a bag especially for backpackers who travel to mostly coast by study of activity. To provide flexibility and to carry stuff they need.
