

ABSTRACT

Along with the development of the current era of Information Technology is one benchmark for modern level in Indonesia. While the learning process is a process that involves several people in order to acquire knowledge. E-Learning can be one of the solutions in the face of the times with regard to the rules contained in the learning process. E-Learning also has the advantage to minimize the effects of time and distance that always arise in the process of acquisition of knowledge. Good design will provide additional value to the people who wear them. Blended learning is a term derived from the English language, which consists of two syllables, and blended learning. Blend is a mix which means that there are a wide variety of learning patterns are used. Learning means learning. So it can be interpreted as a merger or blending aspects of learning. These models consider several characteristics: (1) The purpose of learning model focused on the business independent learning centered on the student as a subject of learning (student-centered), (2) The position of lecturer in this model as a facilitator who helps and motivates students to develop the integrity of the study (3) the study is still being done in the classroom, by combining traditional meeting with the E-learning (blended learning). In connection with the use of the Internet as a source of learning, the support device is a computer connected to the Internet network becomes one of the important conditions With this thesis hopes can make students more Telkom university to develop and improve the motivation to learn.

Measuring the quality of a study at an institution can find out how good the quality of the methods adopted in the study, which which can increase competitiveness in order to achieve the goal of an institution.

This thesis was made to implement a model one for the measurement of blended learning using a *Chart for blended learning* in the form of a website so that the institution can determine the quality of blended learning which they apply.

Keywords : *Blended Learning, Chart for blended learning, E-Learning, Website*
