

ABSTRACT

Social Rehabilitation Center for Persons with Disabilities (Balai Rehabilitasi Sosial Penyandang Disabilitas/BRSPD) is one of the Technical Implementation Units of Social Service of West Java that have a function to perform rehabilitation of persons with disabilities. To support the activities, nowadays an inventory done by recording manually using Microsoft Excel and then archived and reported. The recorded reports including Inventory Items Card (KIB), Inventory Rooms Card (KIR), Book Inventory, and a Recapitulation of Mutation. This leads to a problem such as ineffectiveness in time, uncontrolled data inventory, errors in data storage and delays in reporting. One of solutions to solve that situation is to build a Web-based Inventory Information System that can integrate all activities or inventories into one system. This system is expected to manage the inventory that can be well coordinated. Created by PHP programming language with CodeIgniter Framework and Oracle Database as a Database programming.
