

Abstract

Business or an activity or activities in which we sell services or goods to earn an income. The company's ability to generate profits is the key to the success of the business or the business, so we can say the business or the business has a good performance.

To determine benefits available in the ongoing business required a financial statement that is in the business or the business. In a financial report, sales report is an important key to determine the extent to which companies can grow and make a profit or gain loss.

For the category of medium-sized business enterprises or above who have quite a lot of manpower, in the manufacture or preparation of sales reports so that financial statements can be handled and distributed properly, so that the company can keep up with what at any time if experience gains or losses.

While the category of business or a small business up to the businesses of households owning a small number of workers, in the preparation of sales reports so that it becomes financial statements will experience difficulties due to the lack of manpower.

Therefore, by utilizing the development of mobile phone technology is evolving today is the smartphone, especially android based smartphone which can be accessed easily, anytime, anywhere, and also have a market price affordable by the middle class. As well as the problems that often occur in the sales reporting, especially for small business owners to franchise categories with household businesses, in this thesis the author will make an Android-based sales reporting application addressed to the seller to report the sale to the owner of the business.
