ABSTRACT

At this time there have been many music studio facilitates a band or musician in terms of exercise, rent musical instruments, as well as the recording process. So many users doing rental of music studio and recordings manually, that is by way of coming directly to the musician. However, with the lack of information about the studio and the management data that is still in writing or system registration of music studio still in manual to make customers who want to rent feel difficult in selecting and determining the schedule of booking a room at the music studio. Therefore needed a music studio rental applications and recording web – bases that can handle the process of room rental at any studio music and can make a container or a place to studio – studio music. In addition, these application can provide convenience to customer in doing room rental at any music studio and choose an empty schedule through the website as well as be able to view report on each studio rental history. With this application the studio and the customer can easily manage data of music studio rental and report data. This application will be created using the bootstrap, gammu sms gateway, the programming language PHP, and MySQL Database.
