

## ABSTRACT

---

The final project aims to make the application a web based Boyolali district Tourism. This application was made because media promotion that exists at the moment is not yet affective and not provide tourism information thoroughly. Application development using the method *waterfall*, built with framework CodeIgniter , PHP programming language, MySQL database and tools editor use the Sublime. The existence of this application is expected to help tourists in getting information about the attractions, events and festivals as well as schedules get tourist sites through Google Maps. This application is also expected to boost the income of the region in the field of Tourism.

Keywords : Boyolali District Tourism, CodeIgniter, *Waterfall*, Website
