

ABSTRACT

At this time, community health development became one of the main program that initiated by the Government of Indonesia, especially for the health of infants, toddlers and pregnant women. Therefore, established a program call Posyandu or Pos Pelayanan Terpadu. However, not the least of society who have less awarness of the importance of the health of toddlers or pregnant women for various reasons. One of the reason is still the lack of socialization about Posyandu and lack of information of the activities of the Posyandu itself. Whereas, with the community come to the Posyandu, they will not only get the healh servive only, but many things can be obtain at the Posyandu. One of them, the community could communicate with each other to establish friendship

Web-based information systems and the SMS gateway is one of the solutions for the Posyandu for improving the quality of service to the local community. With the presence service through interactive web and SMS gateway, is expected to ease in the Posyandu services to the community.

Based on test results and implementation, Obtained the result that this application facilitate the officer (kader) posyandu in doing posyandu activity by referring to result of performance questionnaire which got that is 3,8283 (Good Category).
