

ABSTRACT

In the implementation of Training and Certification activities, the D3 Information Systems Study Program, Faculty of Applied Sciences, there are still obstacles in the form of a lack of facilities to facilitate the Training Coordinator and Students to provide information about training and certification, manage training data, register for training and there are still difficulties in getting news about training and certification. Based on these problems, the authors developed a training and certification data collection system application. To achieve this goal, the author uses the waterfall method. The expected result is a website-based application with search, registration, validation and payment features.
