

ABSTRACT

Payroll is a payment or payroll system made by the company to employees. Many companies still calculate payroll manually, especially if the company has a lot of employees and becomes relatively long. With the application of payroll and employee tax PPh21, the company does not need to calculate using manual means. In making applications, the methods used are payroll and employee taxes, gross methods, computer/laptops as device tools, and visual studio code as application tools. With this application, the performance of work to calculate payroll and employee tax PPh21 gross method can be faster and more practical. The company no longer calculates manually and he can save more time.
