

ABSTRACT

RSUP Dr. M. Djamil Padang is a Class A Education Hospital which was declared to have passed the Plenary Accreditation on December 31, 2018 and International Accreditation on April 9, 2019 by the International Hospital Accreditation Commission (KARS). The main activity of RSUP Dr. M. Djamil Padang provides specialist and sub-specialist health services to patients. In order to simplify the tasks and activities at RSUP Dr. M. Djamil Padang, the use of information technology is necessary.

Medical services that have not been supported by an optimal use of technology will cause problems, especially regarding to medical services to patients. The purpose of this study is to create a blueprint enterprise architecture at the Dr. M. Djamil Padang as a guideline for achieving organizational goals and using the concept of TOGAF ADM. TOGAFADM is a complete methodology. Many organizations do not understand clearly how the stages of the methodology are translated into enterprise architecture design activities.
