

ABSTRACT

The Sumbul Pegagan Dairi Health Center is one of the health service centers in the district of Dairi, North Sumatra. Sometimes, information about Puskesmas is difficult to obtain, such as unclear doctor practice schedules making it difficult for people to consult directly with doctors, even having to wait a long time due to the large queues. In addition, data collection and archiving of The Sumbul Health Center's medical records are still done manually, so if the related parties needs some data, it will take more time to find it. Based on some of these obstacles, this application is designed to make it easier for the community and The Sumbul Health Center, where the public can get information about the The Sumbul Health Center, make an appointment with a doctor, or consult with a doctor online through the chat feature in the designed application. As for the The Sumbul Health Center, it is hoped that this application can assist in recording, archiving, and managing data, so that various information can be processed optimally and used in every medical action that will be carried out.
