ABSTRACT

The development of the hotel business in Indonesia has increased. This is supported by the increasing number of guests. This increase is one of the reasons why the development of hotels is fast and rapid. Hotel Surya Andesa is a hotel in Klaten Regency which has problems related to this increase, such as unscrupulous employees manipulating bookings and wrong records. Therefore we need a website application that can manage and overcome these problems.

This website-based application can make daily and hourly bookings, manage room details, manage employee users, manage bookings, make cashless payments, and generate reports. To support the creation of Front-End and Back-End applications, this application is built using the Waterfall method, the Laravel Framework, and testing with User Acceptance Testing.

Keyword : Waterfall, Laravel, Framework, User Acceptance Testing.
