

ACKNOWLEDGMENT

The first is gratitude for the presence of Allah SWT. This thesis is written to meet the requirements obtained Master Degree in Engineering (M.T.) at School of Electrical Engineering Program at Telkom University, Bandung, Indonesia. The author would like thank to:

1. My Parents, who have always supported me morally and financially while studying at the Telkom University.
2. Dr. Ir. Jangkung Raharjo, M.T. as thesis supervisor I, and Kharisma Bani Adam, S.T.,M.T.,Ph.D as thesis supervisor II, who has provided guidance and advice during the preparation and finalizing of this thesis.
3. My friends who always provide input and suggestions regarding the research of this thesis.
4. All Lecturers and Staff of the School of Electrical Engineering, Telkom University Masters Program who have provided their knowledge during the lecture period.
5. Fellow Student who always supported and give spirit for finalizing this thesis.

May Allah SWT give a bless for all good things that has been given to make the author finalizing this thesis and this study. The authors hope that this research will have an impact on technological progress, especially renewable technology and waste to energy development.
