

## LIST OF FIGURE

2.1	Signals obtained from respiratory activity. (Source: H. Hamdi, dkk., Emotion assessment for affective computing based on physiological responses, 2012) . . . . .	8
2.2	Block diagram of radar systems in general. . . . .	9
2.3	The working principle of radar. . . . .	9
2.4	The FMCW radar waveform. . . . .	11
2.5	The FFT signal path to range-doppler frame. . . . .	12
2.6	Diagram of FMCW radar system for respiration detection. . . . .	13
2.7	Illustration of the radar wave propagation. . . . .	14
2.8	The block diagram of FMCW radar system to detect human respiration behind the wall. . . . .	15
2.9	The illustration of A-scan. . . . .	18
2.10	The illustration of B-scan. . . . .	19
2.11	The illustration of C-scan. . . . .	19
3.1	The radar FMCW 24 GHz. . . . .	31
3.2	The illustration of the laboratory experiment setup. . . . .	31
3.3	Measurement of the first scenario. . . . .	32
3.4	Measurement second scenario. . . . .	32
3.5	Measurement third scenario. . . . .	33
3.6	The workflow to detect human respiration under rubble. . . . .	36
3.7	Magnitude response of LPF output in the frequency domain when the target is laid down under rubble with other objects. . . . .	37
3.8	Time domain representation of phase detector output in ROI. . . . .	38
3.9	Frequency domain representation of phase detector output in ROI. . . . .	39
4.1	The magnitude response of LPF output in the frequency domain. . . . .	43
4.2	Phase detector output for each FFT index ROI in time domain representation. . . . .	44
4.3	Phase detector output for each FFT index ROI in frequency domain representation. . . . .	44
4.4	Phase detector output comparison between with and without a target in the time domain for the first scenario. . . . .	45

4.5	Phase detector output comparison between with and without a target in the frequency domain for the first scenario. . . . .	46
4.6	Magnitude response of LPF output comparison between with and without a target in the frequency domain for the first scenario. . . .	47
4.7	Comparison of the magnitude response in the frequency domain for different concrete brick thicknesses. . . . .	48
4.8	The phase detection result obtained several points in the first scenario.	49
4.9	B-scan image for the first scenario. (a) With target. (b) Without target.	50
4.10	The Weighting process method to reduce clutter in the first scenario.	51
4.11	The Eigen 1 of SVD method to reduce clutter in the first scenario. .	52
4.12	The LTS method to reduce clutter in the first scenario. . . . .	54
B.1	The magnitude response of LPF output in the frequency domain for the second scenario. . . . .	
B.2	Comparison of the magnitude response in the frequency domain for the second scenario. . . . .	
B.3	The magnitude response of LPF output in the frequency domain for the third scenario. . . . .	
B.4	Comparison of the magnitude response in the frequency domain for the third scenario. . . . .	
C.1	Phase detector output in the time domain using BPF. . . . .	
C.2	Phase detector output in the frequency domain using BPF. . . . .	
C.3	Phase detector output for each FFT index ROI in time domain representation in the second scenario. . . . .	
C.4	Phase detector output for each FFT index ROI in frequency domain representation in the second scenario. . . . .	
C.5	Comparison of phase detector output in the time domain in the second scenario. . . . .	
C.6	Comparison of phase detector output in the frequency domain in the second scenario. . . . .	
C.7	Phase detector output for each FFT index ROI in time domain representation in the third scenario. . . . .	
C.8	Phase detector output for each FFT index ROI in frequency domain representation in the third scenario. . . . .	
C.9	Comparison of phase detector output in the time domain in the third scenario. . . . .	

- C.10 Comparison of phase detector output in the frequency domain in the third scenario. . . . .
- C.11 The phase detection result obtained several points in the second scenario. . . . .
- C.12 The phase detection result obtained several points in the third scenario.
  
- D.1 B-scan image for the second scenario. (a) With target. (b) Without target. . . . .
- D.2 B-scan image for the third scenario. (a) With target. (b) Without target. . . . .
- D.3 The Weighting process method to reduce clutter in the second scenario. . . . .
- D.4 The Eigen 1 of SVD method to reduce clutter in the second scenario.
- D.5 The LTS method to reduce clutter in the second scenario. . . . .
- D.6 The Weighting process method to reduce clutter in the third scenario.
- D.7 The Eigen 1 of SVD method to reduce clutter in the third scenario. .
- D.8 The LTS method to reduce clutter in the third scenario. . . . .
- D.9 The Eigen 2 of SVD method to reduce clutter in the first scenario. .
- D.10 The Eigen 3 of SVD method to reduce clutter in the first scenario. .
- D.11 The Eigen 2 of SVD method to reduce clutter in the second scenario.
- D.12 The Eigen 3 of SVD method to reduce clutter in the second scenario.
- D.13 The Eigen 2 of SVD method to reduce clutter in the third scenario. .
- D.14 The Eigen 3 of SVD method to reduce clutter in the third scenario. .
