

ABSTRACT

Pariaman is one of the cities in West Sumatra which is visited by many tourists. The city, which is nicknamed the city of Tabuik because it has a Tabuik icon every year, is known as a tourist spot and culinary spot. Pariaman has various ways of promoting its city, one of which is by showing the activities carried out by local officials as well as the latest news about Pariaman city. News about Pariaman is made news in online and print media, with so much news about Pariaman City. The Pariaman Informatics Communication Service establishes partnerships with several print media in the form of newspapers, tabloids and magazines. Print media from several companies will send newspapers every day to the public communications sector. Officers in the field of public communication seek news about Kota Pariaman from various media (newspapers, tabloids and magazines) and clip the news onto paper. Then the news clippings will be re-entered into a Microsoft excel file and each month the Kota Pariaman data will be attached to the ranks of the City Government. At Diskominfo Pariaman in making mass media clippings they still use book media by collecting data then scanning and printing it. This has caused a lot of complaints about the long time for making clippings and making receipts for the media. Therefore, the design of this news clipping website can be a solution to overcome existing problems, and with a computerized system it can achieve a more effective and efficient job. The computerized system is better than the manual system that was used beforehand. Therefore it is necessary to make an E-clipping application to integrate all data and information. In this study using the waterfall method, with the programming language PHP and MySQL as the database. The web-based application, namely E-Klipping itself, is very appropriate to assist in the dissemination of information to related agencies, so that all information can reach the community. Therefore, it is hoped that with this application, the job of clipping and making receipts will be in one application that can provide data backup, receipt making and clipping creation quickly and practically. This application has several services including: first, the service inputs data and can include photos in pdf format. secondly, the service prints data sheets in pdf. Third, it provides data input for the media. Fourth, provide for verifying news and providing receipts to the media. Fifth, provide a website that is open to the public.
