

ABSTRACT

CV Raka Putra Utama is one of the companies in the clothing retail sector which was founded in Bandung in 2019. Some of the problems that occur with this company are in the finance section, the recording of transactions is not in accordance with accounting standard guidelines, the recording is still done manually and has not been computerized . This makes the data not input properly so that errors can occur in recording reports. Making this Point of Sales (POS) application uses the Software Development Life Cycle (SDLC) method with a waterfall model, PHP programming language, design using the Unified Modeling Language (UML), and the CodeIgniter framework. And testing is done using Black Box Testing. It can be concluded that the Point of Sales (POS) application for sales can help companies to produce good financial reports based on transaction management whose functionality can make sales transactions, make general journals, make ledgers, trial balances, profit and loss reports, and reports sale.

Keywords: Point of Sales, Sales, PHP, Codeigniter
