

ABSTRACT

Lazis Syamsul 'Ulum or known as LAZISSU is an Amil Institution that distributes Infaq, Fidyah and Waqf funds located at the Syamsul Ulum Mosque, Telkom University. In the process of recording the distribution of funds, Lazis Syamsul 'Ulum often had problems when recording, so a system was needed to help with the recording process. This application was made using the prototype method and MySQL as Database Management. Design using BPMN, Use Case Diagram, and Entity Relationship Diagram. This application carries out testing using the Black Box Testing method. This application can record zakat distribution and collection of program funds. It is hoped that this application will help Lazis Syamsul 'Ulum in taking notes.
