

ABSTRACT

Ayam Kremes Mas Jono is a Micro, Small, and Medium Enterprise (MSMEs) engaged in the culinary business, located in Sukabirus, Bandung, West Java. Ayam Kremes Mas Jono provides a variety of food and drink menus. Based on the results of the author's observations, the owner has difficulty in seeing what menus or packages have been sold and how many menus have been sold per day. So that when a sales transaction occurs, the owner only records the transaction directly in the notebook without sorting menus from the sales that occur, and still using manual recording. So based on the formulation of the problem above, the author creates a system that can make it easier for owners to record sales transactions, and a system that is able to display sales transaction data using QRIS. This system was created using the PHP programming language and the Codeigniter framework, the system was developed using the System Development Life Cycle (SDLC) with the waterfall method and testing using black-box testing.

Keywords : Micro, Small, and Medium Enterprise (MSME), Sales, System, QRIS (Quick Response Indonesia Standard)
