ABSTRACT

Aliyah Medika Clinic is a clinic that was established in 2017, which is located on jl. Sukabirus, Citereup Village, Dayeuhkolot District, Bandung Regency, West Java. Aliyah Medika Clinic has quite complete facilities, one of which is the general poly facility. However, in recording such as patient registration, examination, recording of medical records, recording of drug prescriptions, as well as in payments, it is difficult because it is still recorded using paper which raises many obstacles, such as writing that is not legible, lost, or even torn. Therefore, a solution is given to this problem by creating an application that is useful for assisting the process of health services. Before making an application, what must be done is to analyze and interview what needs are needed for making an application. The web-based application that was created serves to store outpatient data from registration to payment. This application is made using the PHP programming language and MySQL database.
