

ABSTRACT

The redesign was motivated by the condition of the facilities which did not support the activities and behavior of its users. The daily activities of Islamic boarding schools are very busy so they require facilities that can support and provide comfort to their users, considering that most of the students are still teenagers. The concept of Islamic boarding schools and the concept of furniture in Islamic boarding schools still do not support all the activities of the students. Through the activity and behavior approach, the redesign of the jabal rahmah orphanage and tahfidz quran Islamic boarding school uses creative and religious concepts. This aims to create pleasant, comfortable and safe environmental conditions for students who are in their growth period so that students are expected to be more productive and comfortable in carrying out activities based on the provisions set by the jabal rahmah Cirebon orphan and tahfidz quran Islamic boarding school. Apart from that, it can create a design that can make it representative of orphanage Islamic boarding schools and tahfidz quran jabal rahmah Cirebon.
