

TURBO PASCAL Programming

Turbo Pascal Programming introduces a person with no programming experience to structured design and the Turbo Pascal Programming language through a series of programs illustrating typical applications. Each Turbo Pascal program contained in this book is first designed using the structured design methodology together with pseudocode. Then each Turbo Pascal statement required in the program is illustrated and explained. The person completing this book will have a firm foundation in the concepts and techniques of structured program design and the use of the Turbo Pascal programming language
