ABSTRACT

Every student on campus IT Telkom reserve the right to information, including information about scholarships. From the results of questionnaires which distributed to 50 students in campus IT Telkom, showed that 31 of respondents say no too often to get information about scholarships in IT Telkom campus, and 15 respondents say never. In terms of level of difficulty of getting information about 26 respondents said that it is not too easy to get information on scholarships in IT Telkom campus, and 18 respondents said it was hard. When asked about the level of student in IT Telkom who needs application to facilitate them to get information on scholarships in IT Telkom, as many as 47 of the 50 respondents said that they need the application to facilitate scholarship information in IT Telkom.

On this project we will design an information system based on Android that will enable students to take care of the need to get a scholarship. This information system will display information about the scholarships which can be found in IT Telkom on smartphone. Later in this application will display the information needed by students of IT Telkom, so that they can know, select, and monitor the progress of the scholarship program itself.

This application will enable students in IT Telkom in the search for information and registration of their scholarship. It is appropriate to the writers questionnaire data that of 30 respondents, 21 respondents or 70% found this application petrified in IT Telkom student in search of information and scholarship application
