

ABSTRACT

Kittiyenzy Salon & Ethnic is a company in beauty services, such as face, hair, and body treatment. This company have around one thousand five hundred customers, but the all activities are done uncomputerized. Income is calculated not using accounting principle, and the income is calculated overally based on service invoice, So the owner cannot know gross and net income for each month.

On that basis, a web based financial statements application for service revenue and sales of goods is created to help the owner in the process its business activities. This application created in the activities of customer data records are visiting and give information, whether the customers get a discount or not. Recording of operating costs come out and recording of transactions that occured, will later produce the accounting reports which consist of the journal, ledgers, income statement and cash flow statement.

In the manufacture of the application, PHP programing language and MySQL database is used as tools with waterfall SDLC as the method. Based on test results using the Black Box testing system, this application can produce information to the admin, such as service revenue, sales of goods, stock card, income statement, and cash flow statement.
