

ABSTRACT

Process of collecting the data of lost vehicles at Polres Cimahi was still in the form of bundles, so that it makes difficult for the officials to seek the data of informers, even it may make the data to be lost. In addition, it also requires many places for storing all bundles. The making of the application of lost vehicles data based on the web in this final project is intended to process/arrange the data of informers, to facilitate the officielas in seeking the data of informers, to take the data of informers. This application is based on the web and the data stored using database MySQL. The research method applied is Prototype and the testing method uses Black Box Testing. This application can be used by *Petugas Reserse* (Detective Officials). The Detective Officials can take the biodata of informers and to print the letters of loss marks, as well as they can take the lost vehicles.

Keywords: Application Lost Vehicles Data, Police, MySQL, PHP, Framework.
