

ABSTRACT

The Design of parking management system is a web based information system which facilitate parking process start from entry gate to the exit gate, also manages missing ticket. This parking process also facilitates manager to organizing employee data, view parking data, view missing data, and price setup.

The making of this final project uses a method of software development, it's the waterfall model and implemented using PHP programming language and MySQL database. On this information system, it can enter parking number, vehicle's license number, payement, and time
