

## ABSTRACT

The purpose of this research is to find out the effects of Corporate Governance Perception Index towards the corporate performance proxied with Return on Equity and Tobin's Q, whether with simultaneous or partial means towards Public Companies listed in Indonesia Stock Exchange and follows the rankings of Corporate Governance Perception Index period 2010-2012. This reasearch uses double regression analysis. The results of testing showed that using simultaneous means Corporate Governance Perception Index had significant impact towards the corporate performance proxied by ROE, meanwhile by simultaneous means Corporate Governance Perception Index didn't significantly impact companies proxied by Tobin's Q. The determination R Square Coefficient showed that the variable "Corporate Governance Perception Index" can explain the variable of work ethics proxied by ROE as much as 31,7%, however Corporate Governance Perception Index can only explain the work ethichs of companies proxied by Tobin's Q as much as 16,1%. Based on tests using partial means showed the results that Corporate Governance Perception Index, Composition Aktiva, Company Growth, and Growth Oppportunity didn't have significant effects towards ROE, the same can be said towards Tobin's Q.
