

Abstract

Information system is a system that uses computer technology to collect, process, store, analyse and disseminate information. Data information system of the population and the correspondence Office of the village kadokan is a specialized information system for storing data population and also the correspondence Office of the village kadokan.

On the application of information system on population and correspondence has been created using the PHP programming language and uses Mysql for the database. The system works the user entering input data the population of which is then processed using an algorithm that has been created after the match then the data directly saved into a database that has been created.

This final project aims to design and implement the population and data processing system of correspondence in the Office of the village kadokan which was originally the manual still is becoming more modern. Where the creation of letters such as death certificate, letter, letter of domicile move birth certificate and still manual and there is no backup data. So that the information system is expected to give convenience to the employee of the village to store and manipulate data and save data backup kadokan village Office correspondence.
