

ABSTRACT

Portfolio is a documentation of the work, accomplishments or personal work published for a particular purpose. Benefits portfolio is as personal branding for job seekers. The portfolio is usually made in a personal website to showcase the work on the internet. In general, the portfolio is written on the personal website, but it is still difficult to search the relevant results. The solution of this problem is the existing portfolio on the personal website are collected into one portal.

In this final project, we create a web portal that embodies portfolio of programmers in Indonesia to showcase their work to a public. The offered features is a portfolio page, categorization expertise, search features and joblist. In this web portal, that is expected to facilitate access to search the appropriate freelance programmer based on expertise and facilitate communication among fellow programmers.
