

ABSTRACT

Syamsul Ulum Mosque (Masjid Syamsul Ulum: MSU) is an official mosque of Telkom University. As an official mosque a university, MSU would have very much agendas or activities and quite complex administrations. Nevertheless with MSU's many activities and complex administrative system, it's become a problem of MSU namely information management issues of activities and administrative system, such as administration of borrowing facilities and Iftar registration. This problem arises because absence of MSU's media or facilities that can manage agenda and centralized administrative system. Currently, the system management are separate from each other. Therefore, need to be made an MSU information system to support all activities at MSU, namely the creation of a website "MSU Center". Website "MSU Center" can displaying contents of information, Iftar registration, and MSU lending facilities. Information contents displays information of MSU's activities. Iftar registration content as an online media of Iftar registration. With existence of this contents into a database Iftar participants become structured and tidy.

Website "MSU Center" built using programming language PHP, programming language MySQL for database, while design interfaces using programming language HTML and CSS.

According test data to the system functionality and the technical test results that by sending the registration SMS iftar with as many as 10 times in each trial data showed that successful registration as much as 80% on registration with the correct format and get the value 0% for the delivery of registration with the wrong format.
