

## ABSTRACT

Growth in any sector of Indonesian society cause many impact, positive and negative. The positive impact that also make the negative impact is amount of motor vehicle in society. That thing become one of indicator that economy, social, trading, and another thing on a good position. But in the other hand, amount of motor vehicle in society appear another problem in society itself, and that problem is motor vehicle theft cases, especially for motorcycle that have biggest amount in Indonesian society. This case was happened since many years ago, and this case make society feel worried. Dual lock installation that suggested also not efective because of any condition that can make us forget it.

Research method that used in this research and design is descriptive method, with this method the problem ini this research can be clear and easily to understood. The description of this problem will be base of the research or experiment to design an equipment to remind people to always use theirs dual – lock on theirs motorcycle.

**Kata Kunci** : *Theft, Descriptive, Reminder*
