ABSTRACT

Language is one of the most influential communication tool and plays an important role for humans. Dictionary is one of the media identifier vocabulary that allows users to define a word in a particular language both in print and electronic form. However, at this time especially in the area of Bandung many the newcomers from outside of Java did not understand the vocabulary Sundanese and it became a major factor difficulty of interacting with the surrounding community. Based on these problems needed something that could make it easier for newcomers to find the meaning of words, especially Sundanese.

This application using PHP (Hypertext Preprocessor) and also Java and uses MySQL. The method used is the method Prototype and tested using the method of Black Box Testing.

Once tested, these applications can be accessed online. This application is able to define the meaning of Sundanese-Indonesian and Indonesian-Sundanese, and also spell words in Sundanese.

Keywords : Sundanese Dictionary, Android Applications
