

## **ABSTRACT**

Software house is a company that sells services to create or develop applications. Typically, to monitor application progress made by software house or seller of services, they need to hold a meeting or an appointment to preach each other through messages. Likewise for the provision of invoices, they must meet or sending the invoice by letter or email.

In this final project, the application is a web based invoice information system where the application can facilitate service buyers and sellers to be able to interact more easily in one place to see the progress of the project and see the invoice of the applications they want made. In this application can also see the programmer performance as measured by assessment when the project manager monitoring the work of the programmer.

The invoice information system has the look of a different menu for each user based on the restrict access provided by the admin. Whether the user will be entered as a project manager, programmer, or client.
