

ABSTRACT

With technology development growing fast, it helps our needs as people that have many curiosity. in this case, our ability to fulfill our needs, which is called shopping. there are many facilities provided, especially with online shop existence, we don't have to trouble ourselves by visiting stores conventionally.

But we can't ignore it, since we are a social being, sometime we want to be given the ease of shopping conventionally, likewise to know is there something we are looking for, or is there any significant price changes. in this case, many advantages can be obtained by shop-owners, for example to manage their shop, marketing and promoting their items or products they have. In this final project, a web-page designed, as a one-stop shopping portal which not only help customers to get information about products they want to know, but also help shop-owners to manage their shop, marketing, promotion, and also transaction. the facilities for shop-owner in this information system technology, maximize their revenues.

On this occasion, writer designs a web-based online system by creating portal that facilitates 4 shops, located in Pasar Tradisional Sayati, each shop have their owned website which are connected to a portal and become one website. this web-based application is expected to facilitates shops, to face global competition, that even these shops located in Pasar Tradisional Sayati, but not left behind in technology development.
