

## **ABSTRACT**

*Lately, technology development is really exquisite in this life, for example in fulfilling human needs. for the record, transaction by internet is really popular. shopping by internet, or better known as e-commerce, is really efficient, we don't have to visit the store, but still able to get what we want. This e-commerce system give many benefits not only to sellers, but also to customers. For sellers, with e-commerce, they can expand their market to wider area, with no extra building rent, staff and other operational cost. Besides, for the customers, it give ease and comfort in transaction with no time or customers location limitation, as long as there is internet connection. But, the diverse needs of every people demands to have efficiency and simplicity to fulfill the diverse needs. From that demands, one stop-shopping concept created. A shopping concept to get variety needs in one shopping.*

*In this paper, an one stop-shopping portal created, to help customers to get information about items or sellers. in this paper, writer have an opportunity to case study in Pasar Tradisional Sayati. This application is created as a web-based application.*

*Keywords: web, one stop-shopping, website*
