

## ABSTRACT

Plastic become an un-separated element from modern human life. Plastic has benefits to make our life easier; however it also brings danger impact. In Indonesia, we can find million bottles and plastic packages threw by people in everyday easily. We can find it easily in every corner of the street, especially in Bandung city. Many people which consciously or not throw the bottle trash not in its place, without thinking the impact of their behavior. According to the available statistic data, Bandung city can produce about 150 tons plastic trashes only in one day. Do you know that each plastic bottle needs about five thousands to one hundred years to decomposition perfectly in the soil? So far, the most handling frequently done in decomposition of waste plastic bottles is by burning. Besides that, now there are so many alternative ways to manage waste plastic bottles to suppress the growth of amount of waste plastic bottles which often used by many people everyday; one of them is by recycle waste plastic bottles to the products which have selling value. However, all we can see is the technique used in recycle process still very minimum, so the resulting products become monotone and unattractive. Waste plastic bottles have also been utilized as a fashion product, as in the *palazore* show which utilizes waste plastic bottles into woman accessories. Michelle Merek also creates the wedding dress design which is made by more than two thousands of plastic bottles. Therefore, when the writer see the evolve potential, the writer wants to further develop the research, so it is expected to produce the better outer than already exist.
