

ABSTRACT

When designing a clothing collection, trend is one of the most important things that you can't forget. Not different with others, this collection also follows the latest trend in Indonesia, a Colony themed trend for the year of 2016/2017 which was forecasted by BD+A. This Colony theme was divided into three sub-theme; Nest work, Termite, and Molecule.

The goals for designing this clothing collection are to make a collection of women's outerwear with colony theme using felting technique and to develop felting technique also adding more variations of felted products in Indonesia. Research methods that were used for this design project are literature study, observation, and experimentation. This project is expected to develop and give information about felting, increasing economic, aesthetic, and functionality value to the said materials and products, and lastly can give references to student and other people in design.

Keywords : trend 2016/2017, colony, felting.
