

## **ABSTRACT**

*Paper is one of the science and technology advancement forms which is used in a large quantity. But, the use of paper can give negative impact for environment and supporting the cause of global warming. On the other hand, there is some species of plant that still less on utilization by public interest, wild flowers. Wild flowers often considered as weeds because they do not have a lot of benefits as a business opportunity.*

*Processing of waste paper and wild flowers through experiment and exploration process with paper making technique using by the combination of pulp and wild flowers into a piece of recycled paper. In this research, the methodology that was use is qualitative method, which include primary method (interview, observation and experimentation) and secondary method (literature).*

*In the process of wild flowers experimentation, there is some obstacles such as weather, the quantity of flowers and suitability of flower characters. While in the coating process, there yet to be found a suitable coat type for recycled paper. The result of material exploration to coating is applicated to fashion accessories product, in this case shoulder bag to increase the economic value, aesthetic value and functional value.*

*Keywords: waste paper, wild flowers, paper making, fashion accessories*
