

## ABSTRACT

---

*Inabah 17 putri is a rehabilitation of young drug addicts, naughty and experienced psychiatric disorders. Inabah 17 putri is under the auspices Boarding Suryalaya Tasikmalaya cure using Toriqah Qadiriyyah Naqsabandiyah (TQN). Inabah 17 putri are still using manual systems for managing data of children which are still using paper, many children the amount of data that is often lost because it is not stored neatly, reports of child and financial notices every month to parents was by phone or sms that is not possible to reply quickly. Then came an idea to utilize existing technology at the moment is to make an application for data storage Inabah 17 putri so well managed and structured, teachers can provide information about child development to parents each month, teachers can provide information about the child's financial payment every month to parents, and parents can consult the child's development. This application design method using apex and oracle database, to use the black box test method is test that focuses on software functionality and outcomes in terms of the desired design.*
