ABSTRACT

Stock Data Processing and Sales Application is an application that will be used to support employee performance in CV Jaya Maju Perkasa to do some restocking item and sale activity. This application has several features such as manage customer data, manage employee data, manage item data, manage sale data, manage retur data and manage purchasing order (PO). These features will be operated by manager, warehouse employee and some sales in this company. This application is built using PHP Hypertext Processor as programming language and DBMS Oracle as data storage. In the process of making the application, there is coherent step in accordance with the SDLC method. SDLC model used is Waterfall model. This application expected can overcome some problem that often occur in the restocking item and sale activity on CV Jaya Maju Perkasa before.
