ABSTRACT

Application of Donation Funds Management for Cancer Patients is used to distribute donation funds for cancer patients that will be doing medications. This application simplify donors and patients in donating and applying donation without coming to foundation, because information will be announce via website. The company that hold event about cancer will be facilitated without coming to foundation. When that event approved, then will be get information vie website.

The application development is done by the Waterfall method. Website based application with CodeIgniter framework, PHP programming language, and MySQL database as a data storage media. So that expected this application will help the foundation to manage donations for cancer patients.
