

Abstract

Capital structure became the primary focus for the company because of the good bad capital structure may affect the company's financial condition. If the structure of the capital came from the external funding i.e. debt would increase the risk of default in the future. Too much debt will be able to inhibit the development of the company which will also make the shareholders think twice to invest capital.

This research aims to analyze the influence of the structure of assets, a measure of the profitability of the company, and against the mining companies on capital sturktur listed on the Indonesia stock exchange (idx). The research sample is determined by purposive sampling method based on the criterion of the mining company that is always listed on listed on the BEI and publish the financial reports as well as presenting the complete data including data from variables that have been examined during the research period (2010-2014), so the retrieved sample as many as 15 companies. The study uses regression analysis using Eviews program panel data.

The results of this research concluded the structure of assets (Asset Tangibility Ratio) does not have an effect on the structure of capital, company size (SIZE) and profitability (Return on Asset) negative effect to the structure of capital and simultaneously the structure of assets, company size, and profitability berpengaruh against sturktur capital.
