ABSTRACT

Web-Based Application on Management of Salaries and Wages is an application that functions to manage, record, and calculate the salaries or wages. This application is needed by a home industry named It Just We that has a lot of employees but still uses the manual calculation and record-keeping of salaries and wages, so that it is easy to find errors in the calculation and record keeping. Computerized technology could help It Just We to solve the problems they face. Web-Based Application of Management of Salaries and Wages on It Just We is made by using the object-oriented programming techniques with CodeIgniter Framework Implementation, using MySQL Database, and using Unified Modeling Language (UML) for the system   design. This application uses manual testing, application testing and functionality testing. This application functions to manage, calculate the salaries or wages, so that resulting in journal and ledger.

Keyword: Web-based Application, Salaries, Wage.
