

ABSTRACT

Revenue Department of Finance and Asset Management (DPPKAD) Padang Panjang are implementing elements of the Tax Office in charge to carry out operational activities tax services. A tax dues to the state treasury of the people under the law that can be enforced. Tax on Acquisition of Land and Building (BPHTB) is a tax imposed on the sale and purchase of land and buildings. Calculation and management of the Department of Revenue BPHTB Finance and Asset Management Area (DPPKAD) still manually and do not have a separate application. Along with the times and technology, the solution in addressing the problem is with the establishment of a web-based application that can handle the start of registration of taxpayers, object of taxation, charging the Tax Payment Area (SSPD), and also the payment BPHTB BPHTB calculation process, which in the end BPHTB be created for reporting it. Aplikasi ini berbasis web dengan bahasa pemrograman PHP berorientasi dan berbasis data MySQL. Metode yang digunakan pada aplikasi ini adalah waterfall. This application is provided for DPPKAD to provide convenience on the part of the treasurer reception SSPD and BPHTB manage, perform research, and manage payments so as to produce journals, ledgers, as well as a recap reception. This application also allows taxpayers to register the taxpayer data, object of taxation, charging and payment BPHTB and SSPD. Can be concluded that application in this final project can help taxpayers and DPPKAD in handling BPHTB.
